

Roni Raj Kamal Pradhan

SENIOR SOFTWARE ENGINEER · FULL-STACK & AI

ronirajkamalpradhan1112@gmail.com / Itanagar, India · Remote
github.com/Roninanu777 / linkedin.com/in/roni-r-k-pradhan-279b06436

Senior full-stack engineer (React, Node, TypeScript, AWS) with five years building a B2B user-research platform end to end as one of two engineers: web app, API, admin console, serverless services and Stripe billing. Built its AI layer, an LLM study-builder agent and AI voice interviews on LiveKit, cut its LLM spend by ~16%, and led the real-time video migration from Twilio to LiveKit.

EXPERIENCE

Senior Software Engineer, CleverX Jan 2024 – Present

B2B user-research platform · promoted from Software Engineer · two-engineer team owning the React app, Node/MongoDB API, AWS serverless services and Stripe billing

- **Built the platform's AI layer:** an LLM study-builder agent (Anthropic and OpenAI SDKs, Langfuse-traced) that authors complete research studies, with a tool-call scheduler that orders calls by each tool's declared reads and writes.
- **Shipped AI voice interviews** on LiveKit agents: persona and voice driven by the study config, live transcription through AssemblyAI and Cartesia, participant reconnection, and server-side session completion.
- **Cut monthly LLM spend by ~16%:** audited Anthropic usage platform-wide, traced a cost spike to low-cache-hit LLM-as-a-judge eval rules, and fixed it with request sampling and model selection.
- **Replaced the live video layer,** migrating Twilio to LiveKit as one coordinated release across four repositories: room and token management, multi-egress recording, per-question highlight clips, observer mode, reconnect handling, and a recording archive pipeline.
- **Opened the platform to programmatic customers** with a public REST API and webhooks: v1 study and participant endpoints, API-key management with superadmin access control, developer dashboard, and published docs.
- **Broadened the unmoderated research suite** with video diary, website testing with interaction heatmaps, and Figma prototype testing; took the Figma OAuth app through Figma's vendor review to general availability.
- **Delivered billing and multi-seat teams on Stripe:** roles, ownership transfer, billing-excluded observer seats, autocharge, credits, and off-platform payment tracking.

Software Engineer, CleverX Mar 2021 – Dec 2023

- **Built and rolled out the design system** (component library and palette) across the web app and admin console, and led the React 18 migration.
- **Owned the search revamp end to end:** migrated Algolia to Typesense, indexed geography, and added job-function, job-level and company-size filters with relevance tuning; later rewrote participant–study matching with search scoring, location weighting and exclusion filters.
- **Built the screener engine** (branching and skip logic with validation, country-match scoring, non-destructive re-screening, quota release on reviewer rejection) and took over transactional email on MJML and Postmark.

PROJECTS

Codebase Archaeology github.com/Roninanu777/codebase-archaeology · codebase-archaeology.pages.dev
Open-source tool that answers “why does this code exist” from git history, PR discussions and linked issues, with every claim cited to a commit or comment. Python, Postgres 16 + pgvector, BM25 hybrid retrieval fused with reciprocal rank fusion, tree-sitter symbol resolution, REST API and MCP server. 2026.

Year Progress Wallpaper github.com/Roninanu777/year-progress-wallpaper
Generates iPhone wallpapers that show year or month progress as a dot grid, with live device preview and shareable API URLs for iOS Shortcuts. Next.js, React 19, TypeScript, Tailwind. 2026.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript (primary), Python
Frontend	React 18, MobX, Tailwind, Radix UI, Vite, webpack, Framer Motion, TipTap, Recharts, Stripe Elements, design systems
Backend & data	Node.js, Express, REST APIs and webhooks, MongoDB and Mongoose, Postgres + pgvector, Typesense, Elasticsearch, Stripe, Jest + Supertest, MJML, Postmark
AI & real-time	Anthropic and OpenAI SDKs, LLM agents and tool calling, RAG (pgvector + BM25), MCP servers, Langfuse tracing and evals, LiveKit server SDK and agents, AssemblyAI, Cartesia, ffmpeg
Infra & CI/CD	AWS Lambda, CDK, S3, SQS, DynamoDB, CloudFront, GitHub Actions, Cloudflare Pages, Docker Compose, PostHog

EDUCATION

B.Tech, Computer Science & Engineering — National Institute of Technology, Arunachal Pradesh 2021
